## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/30/2003 has been entered.

### ***Claim Rejections - 35 USC § 103***

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mesaki et al (US 6,217,231 B1) in view of Enochs et al (US 4,818,056).

Mesaki et al was cited in the previous office action.

Mesaki et al disclose an optical module comprising a ferrule having a slope end surface supporting an optical fiber penetrated therethrough (Figs. 23c, 23d); a photodetector mounted on the ferrule, and optically coupled directly with the optical fiber (Figs. 23c, 23d); a module substrate supporting the ferrule, and a resin package covering the ferrule so that an end of the ferrule protrudes from the resin package (Figs. 21, 22a); electronic parts mounted on the module substrate (Fig. 21); engagement

Art Unit: 2874

protrusions extending along side surfaces of the resin package, to be engaged with an optical connector (Fig. 21).

While Mesaki et al teach the mounting of the photodetector on the ferrule surface, they do not teach the mounting of the photodetector on the end surface. On the other hand, Enochs et al teach mounting of the photodiode directly on the end surface of the ferrule (Fig. 3), where the photodiode is smaller than an area of the ferrule end surface. Enochs et al explicitly teach that such an arrangement is advantageous because it improves optical coupling between the optical device and the optical fiber (column 1 lines 5-45).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Mesaki et al device to have photodetector directly attached to the ferrule structure as taught by Enochs et al.
